2. Introduction

Thank you for purchasing the Keeler Vantage Plus Indirect Ophthalmoscope.

We have taken the greatest care in the design, development and manufacture of this product to ensure that you get many years of trouble free service. However, it is important that you read the descriptions, installation and operating instructions carefully prior to installing or using your new indirect ophthalmoscope.

Please read and follow these instructions carefully.
3. Symbols

Read user instructions for Warnings, Cautions and additional information

The CE mark on this product indicates it has been tested to and conforms with the provisions noted within the 93/42/EEC Medical Device Directive

Consult instructions for use

Double insulated

Manufacturers name and address

This Symbol on the Product or on its Packaging and instructions indicates that it was put on the market place after August 2005 and that this product shall not be treated as Household Waste.

Type B protections against shock

Mandatory action sign

Follow instructions for use

High voltage

Trip hazard

Optical radiation hazard

Hot surface

Non-ionizing radiation

This way up

Keep dry

Fragile

Material suitable for recycling
4. Safety

Device classification
CE Regulation 93/42 EEC: Class I
FDA: Class II

Carefully read this Instruction Section before using your Keeler product. For your own safety and that of your customers observe all cautionary information provided in this section. The following information is intended to highlight potential safety hazards that can be associated with misuse, or damage

Warnings and cautions

Check your Keeler product for signs of transport / storage damage prior to use

Do not use if the product is visibly damaged, and periodically inspect for signs of damage

Do not use in the presence of flammable gases / liquids, or in an oxygen rich environment

This product should not be immersed in fluids

Do not disassemble or modify the battery. There are no serviceable parts inside

Do not dispose of battery in fire, puncture or short circuit

Do not use a battery that is deformed, leaking, corroded or visually damaged. Handle a damaged or leaking battery with care. If you come into contact with electrolyte, wash exposed area with soap and water. If it contacts the eye, seek medical attention immediately

US Federal law restricts this device to sale by or order of a physician or practitioner

Don’t fit mains power adapter into a damaged mains outlet socket

Route power cords safely to eliminate risk of tripping or damage to equipment

Bulbs / LED’s can reach high temperatures in use – allow to cool before handling

Do not exceed maximum recommended exposure time

After removal of the bulb / LED do not touch the bulb / LED contacts and the patient simultaneously
4. Safety

Use only genuine Keeler approved parts and accessories or device safety and performance may be compromised.

Use only Keeler approved batteries, chargers and power supplies as per the accessories listed in section 12.

The product has been designed to function safely when at an ambient temperature between +10°C and +35°C.

Keep out of the reach of children.

To prevent condensation from forming, allow instrument to come to room temperature before use.

For indoor use only (protect from moisture).

When replacing lithium battery pack, turn indirect off and attach new pack.

Remove batteries when device may not be used for prolonged periods.

Do not charge battery in any environment where the temperature may exceed 40°C or fall below 0°C.

There are no user serviceable parts inside. Contact authorised service representative for further information.

Ensure battery orientation is correct, or personal injury / damage to equipment may occur.

Care should be taken when handling halogen bulbs. Halogen bulbs can shatter if scratched or damaged.

Ensure device is securely held in docking station to minimise risk of injury or damage to equipment.

Follow guidance on cleaning / routine maintenance to prevent personal injury / damage to equipment.

Switch off the electrical supply and disconnect from the mains electrical supply before cleaning and inspection.

Dispose of batteries in line with local environmental regulations.

At product end of life dispose of in accordance with local environmental guidelines (WEEE).

Note: Lithium Ion batteries contain no toxic heavy metals such as mercury, cadmium or lead.
4. Safety

Safety considerations

⚠️ ⚠️

It is well established that exposure of the eye to intense light sources for extended periods of time poses a risk of retinal photic injury. Many ophthalmic instruments illuminate the eye with intense light. The decision about the intensity of the light level to use in any procedure must be made on a case to case basis. In each case, the clinician must take a risk benefit judgement about the intensity of light to be used. Use of insufficient intensity may result in inadequate visualization and in adverse effects more serious than retinal photic damage. Further, despite all efforts taken to minimise the risk of retinal damage, damage may still occur. Retinal photic injury is a possible complication of the need to use bright light clearly visualize ocular structure during delicate ophthalmic surgical procedure.

While no visible retinal lesions have been identified for ophthalmic instruments, it is recommended that illumination levels be set to the minimum level necessary to perform the diagnostic function. Young children and persons with diseased eyes may be at a higher risk. The risk may also be increased if the person being examined has had any exposure with the same instrument or any other ophthalmic instrument using an intense visible light source during the previous 24 hours. This will apply particularly if the eye has been exposed to retinal photography.

The light emitted from this instrument is potentially hazardous. The longer the duration of exposure, the greater the risk of ocular damage. Exposure to light from this instrument when operated at maximum intensity will exceed the safety guideline after 27 minutes.
5. Setting up and using the Vantage Plus

Description of the Product

A. Headband Size Adjustment Knob
B. Headband Height Adjustment Knob
C. Metal Outer Brow Band
D. Brow Band Tension Knob
E. Ophthalmoscope Angle Knob
F. Lithium Battery
G. Hinge System
H. Aperture Lever
I. Filter Lever
J. Mirror Angle Control
K. Individual Eyepiece
L. Front Window
M. HiMag™ Lens
N. Teaching Mirror
O. Binocular Block
P. Bulb or LED Cover
Q. Rubber Eyecaps
R. Optics of Eyepiece
S. Interpupillary Distance Control
T. Head Dimmer Switch
5. Setting up and using the Vantage Plus

**Headband Adjustment**

**Comfortable Fit**
Adjust the size (A) fig.1 and the height (B) fig.2, so that the instrument is supported comfortably around and on top of the head.

**Ophthalmoscope Angle Alignment**
For vertical alignment of the eyepieces and binocular block (O), adjust the height of the Metal Outer Brow Bar (C) if necessary by using the browband tension knobs (D) located on the sides of the headset (fig 3).

Position the Binocular Block (O) as close to the eyes or spectacles as possible for maximum field of view. Slightly loosen the ophthalmoscope angle knob (E) to allow for adjustment and tighten when in position as in (fig 4).
5. Setting up and using the Vantage Plus

Interpupillary Distance Setting Control (S)
Because the eyes are dissociated, particular care must be taken to ensure the optics (eyepieces) are set properly in front of each eye.

Always set the Aperture Selection (H) to the large light patch for this exercise.

Place an object, perhaps the thumb, approximately 40cm from the face and centre it horizontally in the light patch. Then, close one eye. Using the thumb and forefinger of the opposite hand, slide the P.D.Control (S) of the open eye (located directly under each eyepiece) so that your object moves into the centre of the field, keeping the object in the centre of the light patch. Repeat for the other eye.

Obtaining a fused image
Ensure that a singular, fused image is obtained as follows:

Mirror Angle Control (J)
The light is positioned vertically into the upper two thirds of the field of view by rotating the spindle (J) located on either side of the binocular block.

Head Dimmer Switch (T)
Turn the illumination on by rotating the headband dimmer (T) in an anti clockwise direction.
5. Setting up and using the Vantage Plus

Setting the Aperture

Aperture Lever Selection (H)

By rotating the knob (H) different apertures may be selected.

The Keeler Vantage Plus has 3 light apertures which offer maximum stereopsis. When you select the aperture the illumination and viewing mirrors automatically adjust for maximum stereopsis.

- **Large**
  The large, round, homogeneous patch is suitable for routine examinations through fully dilated pupils. In this position the mirror remains in the forward position and the optics are diverged.

- **Intermediate**
  The intermediate patch is designed to reduce reflections when entering a partially or poorly dilated pupil (3mm). It is also ideal for closer inspection of particular fundal areas. The mirror and optics stay in the mid position.

- **Small**
  This light patch is ideal for small, undilated pupils. The mirror moves back and the optics automatically converge.
5. Setting up and using the Vantage Plus

Filter Lever Selection (I)
By rotating the lever (I), different filters may be selected.

Blue Circle
Cobalt blue filter for fluorescein angiography.

White Circle
Clear light – Select the clear with no filter when inspecting a specific pathology and a brighter, whiter light is desired.

Green Circle
Red Free filter – this filter reduces the red light, so blood will appear black, silhouetted against a dark background.

Diffuser
This unique extra wide beam of diffused light permits a more relaxed technique during more challenging fundus examinations.

Beginners may also find this aperture particularly helpful since, in order to achieve a full lens image, the alignment between the headset, the condensing lens and the pupil is
6. Wireless chargers – power supply assembly

Set plug
Replace the blanking plate with the appropriate mains plug adaptor if required, or use IEC 60320 TYPE 7 connector (not supplied).
6. Wireless chargers – Standard Lithium

Inserting/Replacing the Battery Pack

1. Release battery by pressing release button as shown and lift battery pack from cradle.

2. To insert new battery pack, place in cradle until fully engaged.

Press release button
6. Wireless chargers – Slimline Lithium-ion

Inserting/replacing the Battery Pack

1. Release battery by pressing release button as shown and lift battery pack from cradle.

2. To insert new battery pack, place in cradle until fully engaged.
6. Wireless chargers

Charging

1. Replace the blanking plate with the appropriate mains plug adapter, and connect plug on cable to power input socket on charger.

Switch on your Lithium Charger by plugging it into a mains outlet.

2. Place your spare battery pack or headset into your Lithium Charger as shown.
6. Wireless chargers

Headband Battery Holder
Flashing LED – Battery requires charging.

Charging Station
No indicator – Battery is fully charged.
Flashing indicator – Top up Charge.
Solid indicator – Rapid Charge.

The battery pack can be used at any time during the charging cycle and will automatically resume charging when battery pack is placed back in the charger.

Direction arrow on charger indicates which battery is being charged.
6. Wireless chargers

**Charging Cycle - Standard Lithium**
The battery attached to the indirect will take approximately 2 hours to fully charge.

The battery will last approximately 2 hours on full power.

The spare battery will take 4 hours to charge.

**Charging Cycle - Slimline Lithium ion**
The battery attached to the indirect will take approximately 1½ hours to fully charge.

The battery will last approximately 1 hour on full power.

The spare battery will take 1½ hours to charge.
6. Wireless chargers – wall mounting

Use template document provided to mark position of charger and drill holes.
6. Wireless chargers – wall mounting
7. SmartPack and WallPack

Parts List

A Hex Key
B Screws
C Screws
D Wall Plugs
E Base Cap
F Wall Mount
G Adhesive Pads
H Rechargeable battery
   Part No. EP39 22079
I Body
J Power Supply
K Australian Plug
L UK Plug
M Euro Plug
N USA Plug
7. SmartPack and WallPack

Set Plug
Assemble the power supply as per the instructions in section 6.

Power conversion
Convert to either WallPack or SmartPack by following the illustration below.
7. SmartPack and WallPack

Fixing the Wall Mount
Use the wall plugs and screws to mount the wall pack unit, attach the adhesive pads to the side of the case.

Connection
Insert the connectors into the sockets as shown. Before connecting ensure that both the dimmer control and mains outlet are switched off.

Charge Time
Charge the battery for 12 - 14 hours before initial use.
Note: The unit becomes warm when charging, this is normal.

Recharging may take place while indirect is in use. Normal battery life is 1.5 to 5 hours depending on setting with a recharge time of two hours or on continuous trickle.
7. SmartPack and WallPack

LED Displays

- Slow Pulse
- Fast Pulse
- LED On
- LED Off

Power Supply Battery
Insert or remove the indirect plug or switch the indirect off/on.

Power Supply Mains
- Switch the indirect ON/OFF
- Insert or remove the mains plug
- Place on or off the cradle switch
- Green LED illuminates when indirect is on

Charging

Trickle Charging

In use

Battery low
8. LED / bulb replacement

Caution: The LED/bulb may get very hot after prolonged use.

Allow LED/bulb to cool and disconnect the instrument from the electricity supply. Remove the LED/bulb from the back of the instrument and insert the new LED/bulb, ensuring the LED/bulb’s key is aligned with the aperture and securely pushed in.

Changing headband rheostat from Bulb to LED operation

Your Vantage Plus LED is already set to LED operation. If you want to change to Bulb operation, please move the switch backwards as shown in the diagram. To return to LED please move the switch forwards as shown in the diagram.
9. Cleaning

Only manual non-immersion cleaning as described should be used for this instrument.

Do not autoclave or immerse in cleaning fluids.

⚠️ ⚠️ Always disconnect power supply from source before cleaning.

a. Wipe the external surface with a clean absorbent, non-shedding cloth dampened with a water / detergent solution (2% detergent by volume) or water / isopropyl alcohol solution (70% IPA by volume). Avoid optical surfaces.

b. Ensure that excess solution does not enter the instrument. Use caution to ensure cloth is not saturated with solution.

c. Surfaces must be carefully hand-dried using a clean non-shedding cloth.

d. Safely dispose of used cleaning materials.
## 10. Specifications and electrical ratings

**Input mains data:** 100-240V – 50/60Hz  
**Power supply rating:** 12V : 2.5amps  
**Operation:** Continuous  
**Classification:** Class II equipment  
Type B protection against shock

11. Annex I – EMC statement and guidelines

The Keeler Vantage Plus / Vantage Plus LED is a medical electrical instrument. The instrument requires special care concerning electromagnetic compatibility (EMC). This section describes the suitability in terms of electromagnetic compatibility of this instrument. When installing or using this instrument, please read carefully and observe what is described here.

Portable or mobile-type radio frequency communication units may have an adverse effect on this instrument, resulting in malfunctioning.
11. Annex I – EMC statement and guidelines

**Guidance and manufacturer’s declaration – electromagnetic immunity**

The Keeler Vantage Plus LED is intended for use in the electromagnetic environment specified below. The customer or the user should assure that it is used in such an environment.

<tbody>
<tr>
<td>Conduction RF</td>
<td>IEC 61000-4-6 3 Vrms 150 kHz to 80 MHz</td>
<td>3 V</td>
<td>Portable and mobile RF communications equipment should be used no closer to any part of the Keeler Vantage Plus LED, including cables, than the recommended separation distances calculated from the equation applicable to the frequency of the transmitter. Recommended separation distance $d = 1.2 \sqrt{p}$</td>
</tr>
</tbody>
</table>
| Radiated RF         | IEC 61000-4-3 3 V/m 80MHz to 2.5GHz | 3 V/m            | $d = 1.2 \sqrt{p}$ for 80MHz to 800 MHz  
$\quad d = 2.3 \sqrt{p}$ for 800MHz to 2.5GHz  
Where $p$ is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and $d$ is the recommended separation distance in metres (m). Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey¹, should be less than the compliance level in each frequency range.² |

---

¹ Field strengths from fixed transmitters, such as base stations (cellular / cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the Keeler Vantage Plus LED is used exceeds the applicable RF compliance level above, the instrument should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as re-orientating or relocating the Keeler Vantage Plus LED.

² Over the frequency range 150kHz to 80 MHz, field strengths should be less than 3 V/m.
### 11. Annex I – EMC statement and guidelines

The Keeler Vantage Plus LED is intended for the use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the Keeler Vantage Plus LED can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the Keeler Vantage Plus LED as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated maximum output power of transmitter W</th>
<th>Separation distance according to frequency of transmitter m</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>150 kHz to 80MHz</td>

<tr>
<td>0.1</td>
<td>0.37</td>
</tr>
<tr>
<td>1</td>
<td>1.2</td>
</tr>
<tr>
<td>10</td>
<td>3.7</td>
</tr>
<tr>
<td>100</td>
<td>12</td>
</tr>
</tbody>
</table>

For transmitters rated at a maximum output power not listed above, the recommended separation distance d in metres (m) can be determined using the equation applicable to the frequency of the transmitter, where p is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

**Note 1** At 80MHz and 800MHz, the higher frequency range applies.

**Note 2** These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.
### 12. Spare parts and accessories

The following accessories are typical of those supplied in the kits as indicated:

**Vantage Plus Bulb version:**

Fitting your HiMag™ Lens (M) and Teaching Mirror (N)
To fit the HiMag™ lens simply push it onto the front of the window as shown in the diagram. To remove simply reverse.

Rubber Eyecaps
Rubber eyecaps are provided to protect spectacles and have been manufactured in rubber to avoid any abrasions. To use simply fit over the eyecaps.

Plano Lenses
The Keeler Vantage Plus supplies as standard +2 dioptre lenses. Plano lenses, if preferred are available and can be fitted as shown in fig.5.

Scleral Depressors
Scleral Depressors are available to view the ora serrata.
13. Warranty

No user serviceable parts – all preventative maintenance and servicing must only be performed by authorised Keeler representatives.

Your Keeler product is guaranteed for 3 years and will be replaced, or repaired free of charge subject to the following:-

• Any fault due to faulty manufacture

• The instrument and accessories have been used in compliance with these instructions

• Proof of purchase accompanies any claim.

Please note:
The LED for the Vantage Plus LED models is guaranteed for 5 years.
Batteries are covered by this warranty statement for 1 year only.

Disposal of old Electrical and Electronic Equipment
(Applicable in the European Union and other European Countries with separate Collection Systems)

To Reduce the Environmental impact of WEEE (Waste Electrical Electronic Equipment) and minimise the volume of WEEE entering landfills we encourage at Product end of life that this Equipment is recycled and reused.

If you need more information on the collection reuse and recycling then please contact B2B Compliance on 01691 676124 (+44 1691 676124)
